

Alert

Alarm Monitoring Utility for the Innotech® Digital Controller

Overview

Alert is a utility that reports on alarms generated by Innotech® Digital Controllers. A Genesis II MPI (Modem/Printer Interface) is required to capture the alarms and forward the details via modem to a computer running this utility.

Once an alarm has been received, *Alert* can immediately notify the PC user through its pop-up and sound facilities, or at a later time through its logging facilities.

Applications

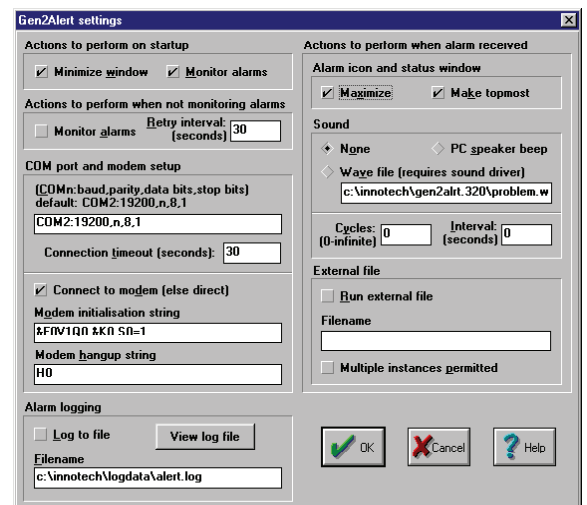

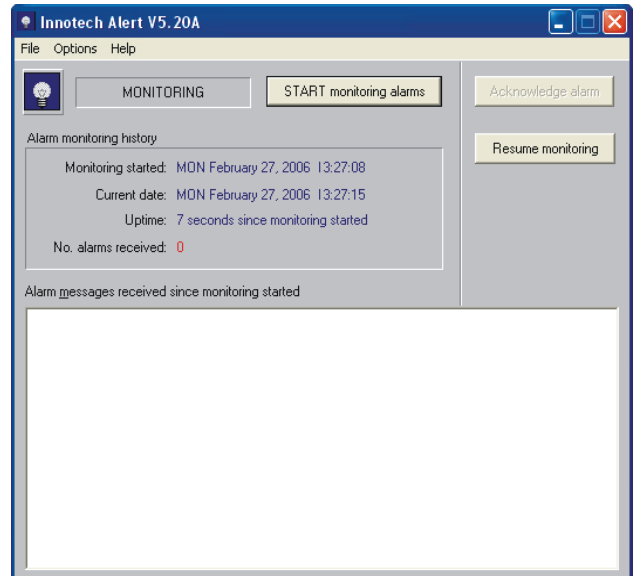

- Monitoring alarms generated by Innotech Digital Controllers

Features

- Alarm acknowledgement
- Full logging of alarm messages and user interaction
- Pops up when alarm is received
- Configurable wave file support when alarm is received
